since 2010, customers can also use eServices to create and modify drawings and annotate them. User interface AutoCAD has several modes of input and editing. The most common input and editing modes are: Direct input using a graphics tablet, a scanner, or a mouse. Annotation object. Freehand drawing. Vector drawing (line, polyline, spline, arrow) Object-based drawing (from vector images). Plotting (from imagery). Sheet layout. Presentation. Graphic tools and filters. User interface A user interface (UI) is a software system's visual user-interface, which is composed of a set of controls used by a human to provide feedback to the system. The user interface is similar to the user interface of a computer operating system. AutoCAD's user interface has five main areas: the application window, the drawing area, the display area, the status bar, and the editing toolbar. Application window The application window displays the application. The application window contains the AutoCAD application, the drawing area, the drawing tools, and the command line. When a user changes the application window's display properties, it changes the display area. Drawing area The drawing area displays the drawing. It includes a palette that contains most of the drawing commands and tools. The drawing area includes a large rectangle for drawing with the Pen tool, a small, triangular inset for drawing with the Eraser tool, a window for drawing with the Paint Bucket tool, a window for drawing with

the Text tool, and a window for drawing with the Line tool. A status bar at the bottom of the drawing area displays status information. A temporary drawing area is displayed below the drawing area to provide additional workspace. Editing toolbar The editing toolbar is similar to a small version of the command line that is available when using the Line and Marker tools. It contains the most commonly used commands, such as Rectangle, Circle, Path, Text, Path, Polyline, and Spline. Clicking the mouse over an object or typing the name of an object opens it in the drawing area, so that the object can be modified. Display area The display area displays the objects on which the drawing is based. It displays the current work area, the drawing area, the status bar, and the drawing area. The display area is similar to the viewport of a computer graphic program a1d647c40b
