File Replication Monitor Product Key [Win/Mac] [Latest]

File Replication Monitor Torrent Download is an advanced file and directory replication and backup software. It provides you with a powerful method of data protection. You can use it to make your work accessible to you no matter where you are. You can initiate new tasks automatically, check the changes, detect failures, schedule work etc. With File Replication Monitor you can: 1. Vary the frequency of backup operations 2. Back up and replicate files and directories 3. Send backups to a remote server or a networked PC (lan/wir) 4. Distribute data from a folder to all other folders (workstations) 5. Send notifications by email to a list of recipients 6. Create a log of all the actions performed 7. Record events 8. Time-based backups (e.g. create backups on a weekly basis) 9. Schedule backups on a specific day or at specific hours 10. Schedule backup operations according to a calendar 11. Create backups on a recurring basis (weekly or monthly) 12. Make copies of the whole directory or only selected files 13. Update file timestamps to save disk space

File Replication Monitor Features: File Replication Monitor is an easy-to-use tool. It's intuitive and very user friendly. You can backup and replicate data in real time. You have total control over your data. You can initiate new tasks automatically, check the changes, detect failures, send notifications etc. You can configure the program according to your needs. File Replication Monitor is a useful and reliable tool that provides you with real-time automatic backup and replication of files and directories. Use it for: · backup data in real time as soon as files were changed or on schedule basis · distribute files to many folders from the single source · send notifications about new files by e-mail to recipients according to a mail list · secure files transferred over LAN, WAN, Internet and e-mail File Replication Monitor can track the specified Web pages, and notify you via e-mail when they change. File Replication Monitor can track remote servers and workstations via the ICMP (ping) protocol and notify you via e-mail or LAN when they are down. File Replication Monitor can check the letters that arrive in your mailbox. If a letter contains a specific phrase (specified by you), the program will perform the operations you have selected: copy the files, dispatch messages, start external applications etc

File Replication Monitor Crack+ License Keygen

1. Runs only on Windows systems that support 32-bit applications. 2. Requirements: 1. Internet connection is required to use remote monitoring. 2. Computer with an Internet connection is required to operate local monitoring. 3. Computer with an Internet connection must have a shared (public) IP address that is registered in the local computer. 4. Computer with an Internet connection should not have a firewall. It is used for remote monitoring. 5. The computer where will be monitoring must have an IP address that can be connected to the remote computer. 6. The local computer must be connected to the Internet. If they are running in a LAN, then there must be a DHCP server that is accessible to the local computer. For more details see the example. 7. You have to log on the remote computer. You can check out the full version at File Replication Monitor Full Crack can process the following operations: · backup files and directories to and from the local and remote computer ·

monitor files on remote computers · monitor files and directories on networked computers · create a disk image of the local or remote computer · back up a file and copy it to the remote computer · create an e-mail attachment from a file on the local computer · send and receive e-mails through a mail server · copy a file to the remote computer · specify a particular file or directory on the local or remote computer · check the contents of all or part of a file on a disk, a directory, or a file system on the local or remote computer · check the existence of a specified file or directory on a disk, a directory, or a file system on the local or remote computer · check whether an active network connection exists between the local computer and the remote computer · monitor the number of files open on the local computer by the user · change the owner and modify the access permissions to files and directories on the local or remote computer · remove the standard wallpaper on the local computer · check the free space on the local or remote computer · send an electronic letter to the specified recipient via e-mail · specify the address of a computer on the Internet · record a Web page for a specified interval · put a message to the specified recipient via e-mail · copy a file to the specified folder on the local computer · record the number of Internet files received · put a file

File Replication Monitor Torrent (Activation Code) Free [Latest-2022]

File Replication Monitor provides a reliable data replication method to backup data in real time as soon as they are changed. You can create a backup server, specify files and directories that should be monitored and create an e-mail or LAN notification. The monitoring server then installs File Replication Monitor software on the target computer(s) and downloads a shared object to it, which keeps track of the file changes made on the source computer. Any changes made to files and directories defined on the source computer will be immediately replicated on the target computer. The replication process can be initiated at a scheduled time or when something happens on the source computer. File Replication Monitor is not an FTP program and works independently of other programs. It has its own TCP/IP protocol and file transfer functions. File Replication Monitor Requirements: File Replication Monitor supports both Windows NT and Windows 2000 servers. The file size limit is dependent on the version of Windows running on the computer. Windows 2000 supports file sizes up to 3.2 GB, Windows NT supports file sizes up to 64 MB. File Replication Monitor supports large folders with 200,000 files and a variety of Windows 2000 and Windows NT file types including all *.txt, *.gif, *.jpg, *.html, *.js, *.php, *.html*. File Replication Monitor supports WAN and LAN replication and supports working with FTP servers. File Replication Monitor Features: · Share computer and folders with an e-mail or LAN · Track remote servers and workstations · Schedule work · Create a scheduled backup or replication · Monitor auto-backup · Monitor auto-replication · Send notifications to an e-mail address or via LAN · Send notifications to several recipients · Delete files after a specified period · Manage web pages for the purpose of web backup and/or backup to a server · Select if you want to include the file extensions or not · Work as a backup program or a file transfer program
